

What is claimed is:

1. A mount for attaching a laser aiming device to a golf putter, comprising:

5        a laser bracket for housing a laser aiming device, said laser bracket being provided with a sliding recess on a lateral side thereof, said sliding recess having an opening tapered off upwardly; and

10      a golf-club holder having a hollow flat portion for being embedded into said sliding recess on said laser bracket and a hollow circular portion for holding a golf-club shaft, and the hollow flat portion is communicated to the hollow circular portion;

whereby said laser bracket can be fastened together with said golf-club holder as said flat portion is inserted along said sliding recess.

2. The mount for attaching a laser aiming device to a golf putter of claim 1 wherein an inner wall of said circular portion of said golf-club holder is provided with at least one non-slip rubber pad, and an outer side of said circular portion of said golf-club holder is provided with a retaining screw, said rubber pad and said retaining screw enhancing said golf-club holder gripping a golf putter.
